

Dietsmann, a new partner for MissionH24

The largest independent specialist in the operation and maintenance of energy production sites has joined the MissionH24 programme.

Dietsmann, world leader in the operation and maintenance of energy production sites, has joined the MissionH24 programme and their partners. This is a prestigious reinforcement to accompany, thanks to common shared values, the pioneering project launched in 2018 by the Automobile Club de l'Ouest and GreenGT.

Dietsmann's backing of MissionH24 and the 24 Hours of Le Mans hydrogen programme will be notably expressed through exchanges, information sharing, analysis of the energy transition and what's at stake from a technological point of view, a domain in which Dietsmann has built up a very strong level of expertise.

Jean-Michel Bouresche

MissionH24 Operations Manager, H24 Team Principal

“It gives me great pleasure to announce the conclusion of this partnership between MissionH24 and Dietsmann. A leading player in engineering in the general energy sector, Dietsmann is a cutting-edge technology company that works on a daily basis, like us, to create tomorrow's world. That they've decided to join our pioneering programme alongside our other partners, all leaders in their fields of activity, adds yet another stone to the edifice we're building and sends out a strong message. MissionH24 unites partners for whom the energy transition and social and environmental responsibilities are major components in their development.”

Peter Kütemann

Founder and President of Dietsmann

“Throughout its history Dietsmann has always remained a pioneering company in the field of maintenance not hesitating to invest and adapt to the evolution of the energy sector. Today, the signing of a contract with MissionH24 represents a big step for Dietsmann. In its role as an energy services company, the Group backs all the energies of the future. Dietsmann is proud to sponsor MissionH24 as a unique experience for the future of mobility. This partnership combines our long history of motor car sponsorship with our commitment to develop hydrogen as an important source of clean energy.”

ABOUT MISSIONH24

MissionH24 is a project developed jointly by the Automobile Club de l'Ouest, the organizer of the 24 Hours of Le Mans, and GreenGT, a specialist in high-power electric-hydrogen solutions, in particular in the field of vehicle propulsion. MissionH24 is laying the ground work for the arrival of an electric-hydrogen category in the 2024 24 Hours of Le Mans. MissionH24 is jointly managed by Pierre Fillon, president of the Automobile Club de l'Ouest, and Christophe Ricard, president of GreenGT.

ABOUT DIETSMANN

Dietsmann is the largest independent specialist in the operation and maintenance of energy production sites.

For over 40 years, the Dietsmann Company and its staff of over 5,000 employees have operated and supplied maintenance services to hundreds of production installations throughout the world by applying the most appropriate and efficient operational and maintenance technologies.

Dietsmann is one of the world precursors in advanced predictive maintenance in the energy industry. Its clients include some of the largest industries in the sector and the group is looking at robotics, analysis of metadata as well as engineering and maintenance as being the crucial tools for the optimization of production and safety as well as for the reduction of emissions in the environment.
